A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch A;Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 A;Note: the sequence of residues 42-76 was taken from the reference that follows R;Michaelsen, T.E.; Frangione, B; Franklin, E.C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Contents: annotation; disulfide bonds
A;Note: Cys-16 is involved in a heavy-light chain bond
A;Note: Cys-105, Cys-107, and Cys-110 form inter-heavy chain bonds
A;Note: Cys-105, Cys-107, and Cys-110 form inter-heavy chain bonds
C;Comment: This chain was isolated from pooled serum of strain 13.inbred guinea pigs.
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (
Dain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C;Superfamily: immunoglobulin cregion; immunoglobulin homology
C;Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin
